

Keys

➤ **NFC Key**

NFC key can be divided into programming key and user key;
The programming key has a variety of different functions: Setting system code, setting lock ID, transfer blacklist, transfer lost keys, collect reports of cleared lost keys, collect lock events and perform emergency key. The programmable key(except emergency key) can not open the lock.
With its integrated battery, the user key provides power to the lock and is able to lock/unlock the door depending on its authorization. It is configured by software, and collects the events from locking/unlocking the door.

➤ **Mini NFC Key**

Take low consumption ARM as core processor, the Mini NFC key communicates with encoder to issue permission information, collect operation logs, and to get real-time key status data..it can upgrade firmware and recharging via Micro-USB port.

The Mini NFC Key only support offline operations, which Clone protected by high encryption (AES128) to ensure the security, the bi-color LED can show the recharging status,unlock status.

➤ **Bluetooth Key**

There is 2 kinds of Bluetooth key, one with digital display and the other without; The key communicates with mobile phones and Bluetooth encoders via Bluetooth function to issue permission information, collect operation logs, and to get real-time key status data.it can upgrade firmware and recharging via Micro-USB port.

The Digital screen BLT key displays battery status, low voltage warning, date and real time status, key and lock operation status information;

The Bluetooth key in Low power consumption mode uses a built in accelerometer to avoid the need for a physical wake up key feature. The Bluetooth key uses "Shake it" technology to activate the Bluetooth function which is then able to communicate with the mobile phone APP or PC software.

Bluetooth keys can be used in various versions of the software (KMS_PROFESSIONAL, KMS_ENTPRISE, Android app, IOS app), which is compatible with all NFC key features, and supports Bluetooth online unlock function.
